ABSTRACT

Today's world is moving towards digitization and automation, and we all even don't like to write letters, like getting permission for leave and request for Bonafide certificate and so on. As a first step we have thought to generate a Bonafide request letter for students those who need Bonafide certificate, they have to fill the form available in the website. So that, the details of the student and the request letter will be generated automatically. It can be downloaded in a portable document format (pdf), so that we can reduce the time to write requisition letter, and even we can reduce the effort of writing a letter. php are used here, students to get a letter in downloadable portable document format (pdf).

CHAPTER 8 CONCLUSION

It is useful for the parent to know the education details of the student by SMS. This system provides better education loan management system and also lot of convince than the old system. The process is very fast, data can be easily entered lot of time is also saved. The education loan management system useful to the poor student to study, and they improved this way of life style in the society. The loan management system to easy to apply. Applying for Bonafide certificate is also user friendly for the student. The burden of waiting for the long Time for the signature of principal is completely avoided.

The college portal solutions demonstrate major technique used to build a portal web application for the college, using the information system PHP. In addition to web-based administration and content management, the portal is also extremely easy to extend. This portal provides a great interactivity and operability with Internet or intranet portals. This portal is a work with dynamic pages over current static pages of the college and provides more flexibility in a real-time system, formulated from scratch.

Also included a mailing service for sending/receiving the message specific to the local network, reducing the turnaround of paper files within an organization. This mailing feature is used to send various reports and files pertaining to departments, memos etc., across the college network to desired destinations instantly. For further work this portal can be made more generalized and could be used to distribute to other similar colleges. Also develop the mailing system
